

UNITY HEALTH GRAND CONCOURSE

A NO-WAX, NATURAL LOOK FOR THE UNITY HEALTH GRAND CONCOURSE

During a \$153 million expansion of Unity Hospital, one of the most ambitious additions was a new, Grand Concourse main entrance to the hospital. In addition to being a high traffic public space, the entrance includes a 24-7 coffee shop, and multiple private and semi-private seating areas.

For these areas, the design team from Gardner PLUS Architects and HUNT Engineers, Architects, and Surveyors, wanted flooring that would bring exceptional durability without requiring a high degree of maintenance. In fact, according to Keith Laird, Director of Interior Design and Space Planning at HUNT, they were looking for a no-wax solution. At the same time, Laird and the other designers wanted a product that would bring a natural, warm look to the space.

The solution? Nature's Paths Select tile. With textures inspired by stone, the LVT offers remarkable aesthetics, with a wear layer that does not require waxing, polish, or buffing. Quantum Guard® HP is a patented wearlayer with aluminum oxide, cured by an ultraviolet process. The highest performing urethane finish in the industry, Quantum Guard brings exceptional wear resistance, stain resistance, and a lower maintenance cost — resulting in amazing aesthetics with a lower total cost of ownership.

Because Mannington serves each account with a single point of contact — it was simple for the design team to order Nature's Paths Select LVT for the Grand Concourse, along with the Mannington resilient sheet and tile that were installed in other areas of the hospital renovation. Simplifying logistics, ensuring timely delivery, and setting the stage for a beautiful installation.
